

The most important part of PACE is often *invisible*.

The Coordination You Don't See

A wide network of specialists, hospitals, community partners and support services

An interdisciplinary team coordinating every detail of care in partnership with the participant

Family and Caregivers there every step of the way

The participant at the center of it all.

A participant may see their doctor or therapist...

What they don't see:

- Shared care plans
- Specialist referrals
- Medication reviews
- Transportation coordination
- Hospital follow-up
- Caregiver communication
- Meal planning

...all working together behind the scenes.

Seamless Coordination is **what makes PACE different**. It's how healthcare becomes **connected care**.

One participant.
One coordinated team.
One complete circle of care.

Scan to find the PACE in your area.
